## (54) INFORMATION RECEIVING TERMINAL

## (57)Abstract:

PROBLEM TO BE SOLVED: To provide a radio calling terminal capable of notification operation corresponding to the kind of information.

SOLUTION: For a radio calling terminal TA1, when a receiving part 250 generates received information by receiving a signal from a base station, a CPU 200 detects an identification information or folder designation information in the information received and stores message information in the folder of a number indicated by these information. The folder is provided in a RAM 270. Here, the identification information and the folder information are fixed beforehand corresponding to the kind of message information. Consequently, the terminal TA1 is capable of automatically sorting the message information. In addition, the CPU 200 reads message information from a RAM 270 for each folder to be displayed in the prescribed display area of a display part 220 and reads pronunciation data corresponding to a folder number from a ROM 280 to supply them to a pronunciation part 230 to have them pronounced.
